

Software Requirements Specification (SRS)

Civil Project Monitoring System (Frontend Only)

Prepared by: Sourav Mallick Semester/Course: Semester 3

1. Introduction

1.1 Purpose

This document describes the requirements for the **Civil Project Monitoring System**, a frontend website built using **HTML and CSS** (and optionally basic JavaScript). The project is meant to demonstrate a static/UI-based system for monitoring civil construction projects — no backend or database is involved.

1.2 Scope

The website will provide a set of static web pages showing how a civil project monitoring system would look and function on the frontend, including sections for project details, progress tracking display, and reports (all with static/dummy data).

2. Overall Description

2.1 Product Perspective

A simple multi-page (or single-page) static website representing a Civil Project Monitoring System UI. No real data is stored or processed — content is hardcoded in HTML.

2.2 Intended Users

- Students/evaluators viewing the demo project
- Represents users like Admin, Site Engineer, and Client (visually only, no login functionality)

2.3 Technology Used

- HTML5
 - CSS3
 - JavaScript (optional, for basic interactivity like menu toggle)
-

3. Features / Pages (Functional Requirements)

1. **Header Section**
 - Logo box and navigation menu (already created)
 2. **Home Page**
 - Introduction to the Civil Project Monitoring System
 - Brief about what the site does
 3. **Project List Page**
 - Static list/cards of sample civil projects (name, location, status)
 4. **Project Details Page**
 - Shows details of one project (progress %, budget, timeline) — static/dummy values
 5. **Progress Tracker Section**
 - Simple UI showing task status (e.g., Pending / In Progress / Completed) using static cards or progress bars
 6. **Reports Page**
 - Sample report layout (text + placeholder images)
 7. **Contact/About Page**
 - Basic info about the team/project
 8. **Footer**
 - Copyright, links
-

4. Non-Functional Requirements

- Website should be responsive (mobile + desktop)
 - Clean and simple UI
 - Consistent color scheme and fonts across pages
 - Fast loading (no heavy assets)
-

5. Limitations

- No backend, database, or login functionality
 - No real-time data — all content is static
 - Only for demonstration/academic purposes
-
